

Agloco Viewbar August Update 2007

23rd August 2007

Agloco Viewbar Update 2007

Revenue – We are excited that we have signed one of our major revenue partnerships earlier this week. We will be making the formal announcement later. While anyone can sign up for automatic revenue sharing deals (which we of course did), getting a major company to work with their own internal system to start to take advantage of the Viewbar's capabilities is very exciting to us. I know for some of you it seems a long time coming (and to us as much as any Member). But the Viewbar has been out less than 90 days. And no responsible company would deal seriously with AGLOCO until the Viewbar was released and stabilized. So we are very please to have cleared all the technical and legal reviews necessary to sign this agreement. It will take our partners tech team 3 to 5 weeks to complete their work, so you should see changes occurring after that time.

Also, thank you to those of you who gave us leads for other potential European and Asian partners. If any of you works in one of those companies please contact us as it makes it easier if someone in the company is an AGLOCO Member to help us.

Tech Update The tech team reported that our move to new servers was completed last week. Early reports are faster downloading for most locations. Also, the correction for showing all hours has been made so that hours for June, July and August are now included in the totals column. Projects like fixing the Tucows downloads, updating the website and emails to all Members are next on the list.

Media – We have received a lot of positive emails about Mike Klingler's interview with Brian recently. In it, he talked about the AGLOCO Vision and he answered some questions about the company's current progress and trajectory. Mike and other Members have worked to make this available to all Members at:

Thanks for all of your efforts for AGLOCO.

The AGLOCO Development Team
